

The diagram shows a large rectangle representing the flyer layout. It features three nested dashed lines: an outermost red dashed line for the bleed, a middle green dashed line for the margin, and an innermost black dashed line for the trim size. Arrows point from text labels to these respective lines on the left side.

trim size (210x99mm)

this is where the dl calendar will be cut.

margin

the margin must be at least
5mm inside the trim size.
(keep text and logos within the
margin)

bleed (214x99mm)

any colour or image that touches the
edge of the dl calendar must also extend
to the edge of the bleed. (bleed to be
2mm on all sides)
